

Degree 1 — method-specific

features particular to one attack method

↓ SAEgis's own cross-attack
feature overlap

Degree 2 — class-specific

adversarial $\neq$ equal-magnitude benign

↓ matched input- L_2 still leaves 0.199 —
but it prices in amplification;
matched $\|\Delta x\|$: $\Delta_{AUC} \leq 0$

Degree 3 — generic displacement

anything that moves the activation
(+ a texture axis: FGSM $\approx$ noise)
